Aquatain AMF

## Aquatain AMF Features and Benefits:

- Kills mosquito larvae & pupae in water
- Prevents adult mosquitos from laying eggs
- Provides effective protection for at least 30 days.
- Easy pour a few drops directly from the bottle onto the water surface
- Spreads around aquatic vegetation to completely cover the water's surface
- Can be used anywhere water pools and attracts mosquitos

Aquatain AMF

## Aquatain AMF - Mosquito Control Film

*Used in water tanks, guttering, pit drains, ponds, dams or anywhere that water pools and mosquitos breed.*

Aquatain AMF is has a physical action rather than a chemical action - no toxic chemicals!

The thin film on the water surface kills immature mosquito stages and disrupts the mosquito lifecycle. Aquatain AMF is very simple to use and is highly effective product for the control of mosquito's breeding in water.

### Where can Aquatain AMF be used?

Aquatain AMF is for use in standing water such as water tanks, gutters, ponds, blocked drains, pot plants, buckets, septic tanks, dams, old tyres or anywhere that water pools & mosquitos breed.

### How is Aquatain AMF applied?

Simple squeeze, tip or pour directly out of the container a few drops onto the water surface and it's done, that simple (1mL per square meter of water surface).

No spray equipment required!

It will spread around aquatic vegetation to completely cover the water's surface forming a continuous barrier against mosquitos.

### How does it work?

Aquatain AMF is a unique silicone-based liquid barrier which self-spreads across any water surface. This barrier is a thin film on the water surface that kills mosquito larvae & pupae and disrupts the mosquito lifecycle.

The surface barrier created by Aquatain AMF means that mosquito larvae & pupae cannot attach to the water's surface and therefore cannot breathe. This surface barrier also prevents adult mosquitos from laying eggs in the water.

- Mosquito Pupa die within two hours
- Mosquito Larva die within two days
- It prevents adult mosquitos from laying eggs and in the water and disrupts the mosquito life cycle for up to 30 days.

### How long does Aquatain AMF last?

Aquatain AMF provides effective protection for at least 30 days.

Repeat application is recommended every four (4) weeks for ongoing mosquito control. As a colourant it can be re applied as required to maintain your desired look. As an algae and aquatic plant suppressant it should be applied every three months, throughout the year for maximum effect.
